

Modernizing the application development landscape for an IT services management giant

An Overview

With remote work becoming a reality, organizations are re-visiting their IT infrastructure strategy. Today, organizations of all sizes and across industries need to modernize their infrastructure to align with the changing business dynamics. Infrastructure modernization enables them to keep the workforce connected and productive from anywhere and anytime.

Realizing this need, a multinational IT services firm wanted to upgrade its application development process for seamless integration with its remote work setup. This is where Softline stepped up to help the company achieve its modernization goals by planning a seamless migration to Microsoft Azure.

Customer pain points

With multiple offices across the globe and around 13000+ workforce, the pandemic accelerated the need to shift towards remote work. Being a leader in data intelligence and data-driven solutions at its core, the company wanted to ensure continued productivity and delivery of solutions to its customer.

In efforts to stay modern on all fronts, they hoped to improve and upgrade their application development process while embracing the new remote work environment. The aim was a faultless integration with their remote work setup so the teams could work without disruption from anywhere.

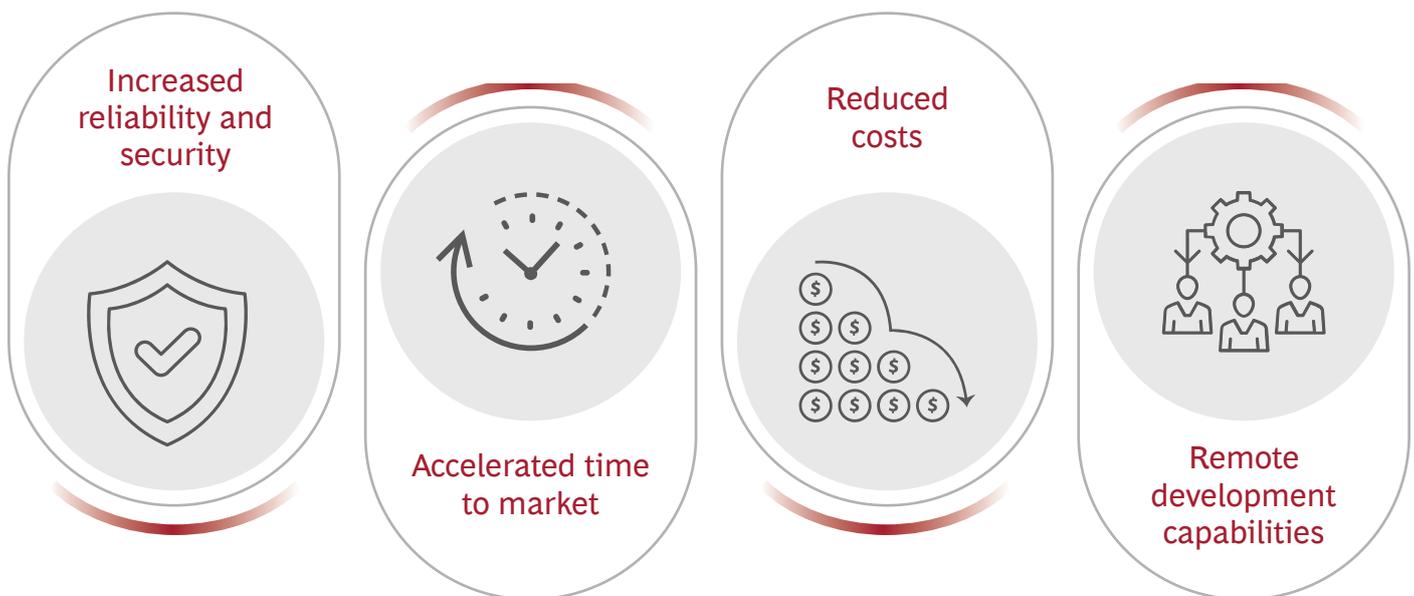

Softline solution

After close consideration, research, and planning, Softline's team suggested migrating the existing application landscape to Microsoft Azure. The migration offered the company better reliability and scalability and removed team development capabilities.

As a first step towards this goal, Softline helped the company switch from TFS to GitHub for a distributed version control solution. This provided the remote teams access to a distributed version control system with a fail-safe hosting service and easy administration capabilities.

End result

Migration to Microsoft Azure enabled the customer to innovate rapidly and meet its customers changing needs with customized applications. It also offered them -
